

BREED CODE – BUR: BURMESE

GENERAL TYPE STANDARD

The Burmese is an elegant cat of medium foreign type, which is positive and quite individual to the breed. Any suggestion of either Siamese type or cobbiness of the British cat must be regarded as a fault.

- HEAD:** The head should be slightly rounded on top, with good breadth between the ears, having wide cheek bones and tapering to a short blunt wedge. The jaw should be wide at the hinge and the chin firm; a muzzle pinch is a fault, the outer line of the ears continuing the shape of the upper part of the face. The head and ears give the impression of an equal-sided triangle. This may not be so apparent in mature males who can develop a fullness of cheek. In profile the head to show good depth between the top of the skull and the lower jaw. The brow to be slightly rounded. There should be a distinct nose break followed by a straight nose ending with the tip of the nose in the same vertical plane as the chin. The lower jaw to show a good depth of chin.
- EARS:** Ears should be medium in size, set well apart on the skull, broad at the base, with slightly rounded tips. In profile, the ears should be seen to with a slight forward tilt. Allowance to be made for correctly shaped but over-large ears in a kitten, when the head size and shape are still developing.
- EYE SET:** The eyes, which must be set well apart, should be large and lustrous, the top line of the eyes showing a straight oriental slant towards the nose, the lower line being round. Either round or slit eyes are a fault.
- EYE:** Eyes should be any shade from yellow to amber, with golden yellow preferred. Eyes should have more yellow than green colour. Eye colour is sensitive to light intensity, should be assessed under identical light conditions moderately diffuse daylight for preference. Allowance made for developing colour in kittens and colour dilution in an older cat.
- BODY:** The body should be of medium length and size (allowance to be made for larger size in males), feeling hard and muscular, and heavier than its appearance indicates. The chest should be strong and rounded in profile, the back straight from shoulders to rump.
- LEGS:** Neck and legs should be slender and in proportion to the body. Hind legs slightly longer than front; paws neat and oval in shape
- TAIL:** The tail should be straight and of medium length, not heavy at base, and tapering only slightly to a rounded tip without bone defect. A whip tail or kink is not permissible.

COAT: The coat should be short, fine, and satin-like in texture, lying close to the body. The glossy coat is a distinctive feature of Burmese and is indicative of good health.

CONDITION: Should be well muscled, with good weight for size, carrying no fat, lively and alert, with a firm feel when handled.

COLOURS: In all colours the under-parts will be slightly lighter than the back. A coat free from barring, or spotting, should be aimed for in all colours. Top awards should be withheld from mature cats (over 2 years of age) showing decided contrast between coat colour and points. The individual colour descriptions are for mature adults. Allowance should be made in kittens and adolescents for a lighter coat colour than the adult standard specifies.

The presence of a few white hairs may be overlooked in an otherwise excellent cat, but a noticeable number of white hairs, or a white patch, is a serious fault. A light sprinkling of white hairs is allowed over the shoulder, where damage may result from injections, or from other cats, as for breeding queens.

COLOUR CHARTS

NO:	Colour	Coat Colour	Nose Pads	Leather &	Other
BUR	Seal	Solid warm dark seal brown, shading almost imperceptibly to a slightly lighter shade on the under-parts; apart from this and slightly darker ears and mask, there should be no body shading or markings of any kind.	Brown.		
BURA	Blue	Solid silver grey only very slightly darker on the back and tail. There should be a distinct silver sheen on rounded areas such as ears, face and feet.	Grey.		
BURB	Chocolate	Warm milk chocolate. Ears and mask may be slightly darker, but legs, tail and lower jaw should be the same colour as the back. Evenness of colour overall very desirable.	Warm chocolate brown.		Pads: Cinnamon pink shading to chocolate.
BURC	Lilac	Pale delicate dove-grey, with a slightly pinkish cast giving a rather faded effect. Ears and mask may be slightly deeper in colour.	Lavender pink.		Pads: Shell pink in kittens, becoming lavender pink in adults.
BURD	Red	Light tangerine. Slight tabby markings may be found on the face, and small indeterminate markings elsewhere (except on sides and belly) are permissible in an otherwise excellent cat. Ears should be distinctly darker than the back.	Pink		
BURG	Cream	Soft cream with a distinct bloom which gives a powdery effect. Slight tabby markings may be found on the face, and small indeterminate markings elsewhere (except on the sides and belly) are permissible in an otherwise excellent cat. Ears should be only slightly darker than the back coat colour.	Pink		
BURB/1	Cinnamon	Warm light coppery cinnamon, with allowance for darker mask and ears.	Light Cinnamon		Pads: Bright pink in Kittens, maturing to very light cinnamon with pinkish undertones.
BURC/1	Fawn	Very pale pearly fawn with pinkish and creamy undertones.	Pale Grey		Pads: Bright pink in Kittens, maturing to extremely pale grey with pinkish undertones

CARAMEL (accepted across all Burmese Varieties) BUR K

Warm toned Brownish lilac/fawn on body. Legs and tail may shade to pale Apricot, honey beige. Denser colour on face and ears, paler on the undersides. Metallic sheen on hocks, ears and facial markings. Nose leather, pads and eye rims a pinkish fawn.

APRICOT (accepted across all Burmese Varieties) BUR K/G

Coat – cool dusty cast over intense pinkish cream. Denser colour on mask and ears, paler undersides. Metallic sheen on hocks, ears and facial markings. Nose leather and pads pink.

TORTIE

The coat may display two shades of its basic colours and may thus appear to display three or even four colours. The colours may be mingled or blotched, without any obvious barring; blazes, solid legs or tail are all permissible. In all tortie varieties, type (body conformation) is deemed more important than distribution of colour.

NO:	Colour	Coat Colour	Nose Leather & Pads	Other

SMOKE

A Non-Agouti cat with the 'silver' gene is a SMOKE.

The smoke effect is produced by a silvery undercoat combined with overhair that is tipped in colour with a silvery root. In repose these cats will appear as solid coated cats, in motion or on parting the hair of the coat, the white undercoat will show. There is great variation in the degree of 'smoking' in cats, and breeders should select for those with the greatest degree of silvery roots and undercoat. The undercoat of all smokes is slightly lighter than the roots of the shaded hairs. Trace markings on the tail, limbs and forehead are allowable but should be considered undesirable, and should not occur elsewhere. Scattered white hairs and rusty or other shadings should not be severely penalised in an otherwise good kitten.

NO:	Colour	Coat Colour	Nose Leather & Pads	Other

SILVER TABBY

An Agouti cat with the 'silver' gene is a SILVER TABBY

The degree of silvering in these cats shows great variety. Some look the same as normal tabbies, while others show extreme contrast between the colour and the ground. The ideal is the silver with the extreme contrast. The Silver Tabbies must display only the Ticked Tabby Pattern.

. Note that markings on the extremities may be entirely absent, or range from slight shading, to kneecaps to distinct stripes.
